SnapSpeak

- An AI presentation coach for improving rehearsal and delivery.
- SnapSpeak analyzes speech, visual posture, and presentation content.

Speech Analysis

- Speech recognition converts the presentation into a transcript.
- The system measures speaking pace, filler words, pauses, word count, and duration.

Posture Analysis

- Computer vision analyzes body pose using keypoints from the webcam.
- SnapSpeak estimates shoulder tilt, body lean, and overall posture stability.

Content Coverage

- The uploaded presentation is analyzed to identify important topics.
- The spoken transcript is compared with those topics to identify covered, partially covered, and missed content.

On-Device AI

- SnapSpeak is designed for local AI inference on Snapdragon-powered HP PCs.
- Qualcomm AI Hub and QNN can be used to optimize supported models for Snapdragon hardware.
